{Hiring Team}
{Company Name}
{City}, {Province}

Dear Hiring Team,

I am applying for the Role of {Job Title} at {Company Name}.

I am a developer with a strong background in cloud infrastructure, Linux systems support, and database administration. This allows me to contribute not only to building applications, but also to maintaining the systems that support them in production.

In my recent experience, I have worked on supporting production environments, automating deployment processes, containerizing applications, and building full stack solutions from development through release. I am comfortable working across the stack and enjoy solving problems that require both technical depth as well as practical thinking and communication.

I am particularly interested in {Company Name} because of its focus on {specific product or mission}. This is similar to other work which I have recently been a part of such as {example of work}. I am motivated by opportunities where I can contribute to meaningful systems while continuing to grow as a developer.

I would bring a strong focus on reliability, clear communication, and a willingness to take full ownership of both development and operational challenges; driving them to full solutions.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my experience can support your team.

Sincerely,
Henrique Custodio
